Candidate seat No: _____

Charotar University of Science and Technology

Sixth semester of B. Tech (IT) Examination

July 2022

IT348 Cryptography and Network Security

Date: 25/07/2022, Monday | Time: 10:00 am to 1:00 pm | Maximum Marks: 70

Instructions:

(i) Attempt *all* the questions.

(ii) Figures to the right indicate *full* marks.

(iii) Make suitable assumptions and draw neat figures wherever if required.

Section 1

Q-1	(a)	Define the following I. Network Security II. Differentiate cryptanalytic attacks and non-cryptanalytic attacks. III. Interception IV. Steganography	[2]
	(b)	Use the playfair cipher to encipher the message "The algorithm is very strong". Use the key "respective".	[2]
	(c)	List and explain various types to evaluate security of a cryptosystem.	[3]
Q-2	(a)	Draw the AES Architecture and explain its working in detail. Consider 10 rounds of AES.	[5]
	(b)	Use the Vigenere Cipher with the keyword "HEALTH" to encipher the message "Life is full of surprises". Find the cipher text.	[5]
	(c)	Find the Greatest Common Divisor of 2740 and 1760 using Euclidean Algorithm.	[4]
		OR	
Q-2	(a)	Explain single round of DES with figure.	[4]
	(b)	Explain in brief. 1. Chosen-message Attack 2. Known-message Attack 3. Key-only Attack	[5]
	(c)	Encrypt the message using Playfair cipher "The house is being sold tonight" with the key "MONARCHY".	[5]
Q-3	(a)	List and explain cryptographic hash function criteria.	[4]
	(b)	Describe in detail "Man-in-the-Middle" attack of Diffie Hellman algorithm.	[5]
	(c)	Write a short note on Broadcast Security and Multicast-Rekeying.	[5]
		OR	
Q-3	(a)	Explain key generation process in DES	[4]
	(b)	What is Kerberos? List down its servers. Define the duties of each server	[5]
	(c)	What is PKI? Discuss the need and future of PKI.	[5]

Candidate seat No: _____

Section 2

Q-4	(a)	Solve the following by applying Chinese Reminder Theorem. a1=2, a2=3, a3=3 and m1=3, m2=5, m3=7.	[3]
	(b)	Discuss RSA Algorithm with suitable example	[7]
Q-5	(a)	What is trapdoor function? What is the strength of trapdoor function in cryptography?	[3]
	(b)	Explain the invertible and non-invertible components used in Feistel cipher.	[6]
	(c)	Calculate the padding bit (SHA512) require for the messages having below-mentioned length: 1. 1 2. 896 3. 897	[3]

OR

Q-5	(a)	Differentiate active and passive attack.	[3]
	(b)	Write a short note on any TWO of the following 1. Master Key Generation in SSL 2. Trust calculation in Preety Good Privacy 3. Secure MIME	[6]
	(c)	Draw and explain model for network security.	[3]
Q-6	(a)	Find the multiplicative inverse of 23 in Z_{100}.	[3]
	(b)	Given p = 31, q = 23, e = 223 and m (plain text) = 439. Demonstrate the working of RSA algorithm using given values.	[7]
	(c)	What is cryptanalysis? What are the different ways to do cryptanalysis?	[3]

OR

Q-6	(a)	What is the purpose of X.509 standard? Explain the signature field of X.509 certificate format.	[3]
	(b)	Explain PGP and Symmetric Key Distribution.	[7]
	(c)	Explain Handshake protocol in SSL.	[3]

****
